

Cognitive Tool for scattered knowledge

- *Thinking and Memory* -

Prof. Asoka Karunananda

Scenario

Concepts (dashboard)

Safari, beaches, up country, one-day, two-day, overnight stay, Van, car, driver,

Knowledge about a trip
(visualizer)

Location

Length of the trip

Accommodation

Transportation

Food

Organizer

Pre-trip

Day 1 –

Day 2 -

Introduction

- Any task has a body of knowledge
- Body of knowledge has a structure and concepts
- Concepts can be organized from different viewpoints
- For example, the task of shopping
 - Body of knowledge (vegetables, fruits, dry rations, meat/fish, other)
 - Concepts (beans, carrot, tomato, banana, ...)
 - Categories (Kitchen, Bedroom, bathroom,)
- Any tasks like preparing for an exam, planning a trip, etc., can be done so
- Yet, it is hindered by the biological limitations, e.g. number of categories

A cognitive device to wake up thinking

- We present this idea with three components (Agents)
 - Visualizer
 - Dashboard
 - Organizer
- One can develop thinking and memory by building the organizer
- We have already demonstrated this model in InPRAWeb to organize students in doing research, writing, and presentations.
